Portfolio profile subject to change due to active management. Percentages may not total 100% due to rounding.

The use of leverage increases risks, such that a relatively small movement in the value of an investment may result in a disproportionately large movement, unfavorable as well as favorable, in the value of that investment and, in turn, the value of the Fund.

The Fund is actively managed in reference to the BofA 3-Month Treasury Bill Index (the "Index"). The Fund does not intend to track the Index and is not constrained by it. The Index is used for performance comparison purposes only and the Fund will generally not hold any of the components of the Index.

The investment objective of the Fund is to deliver a positive absolute return in all market conditions, in the form of income plus capital appreciation over a rolling three-year period. The Fund is actively managed and seeks to achieve its objective through exposure to currencies, and U.S. and non-U.S. interest rates and issuers. Such exposure may be achieved by investing in securities and other instruments, including, debt securities (which may be fixed and/or floating rate and rated or unrated) issued by governments of both developed and emerging market countries or their sub-divisions, government agencies and government-sponsored enterprises, mortgage-backed securities and other asset-backed securities, units in open and closed-ended collective investment schemes, inflation indexed bonds issued by both governmental, quasi-governmental and/or corporate issuers, corporate debt securities (including, without limitation, convertible securities and corporate commercial paper), structured products which comply with the requirements set out in the Central Bank UCITS Regulations, deposits and participation notes.

## About Risk:

Fund share values are sensitive to stock market volatility, adverse market, economic, political, regulatory, geopolitical and other conditions. In international markets, these risks may be more significant. An imbalance in supply and demand in the income market may result in valuation uncertainties and greater volatility, less liquidity, widening credit spreads and a lack of price transparency in the market. Investments in income securities may be affected by changes in the creditworthiness of the issuer and are subject to the risk of nonpayment of principal and interest. The value of income securities also may decline because of real or perceived concerns about the issuer's ability to make principal and interest payments. Derivative instruments can be used to take both long and short positions, be highly volatile, result in economic leverage (which can magnify losses), and involve risks in addition to the risks of the underlying instrument on which the derivative is based, such as counterparty, correlation and liquidity risk. If a counterparty is unable to honor its commitments, the value of Fund shares may decline and/or the Fund could experience delays in the return of collateral or other assets held by the counterparty. As interest rates rise, the value of certain income investments is likely to decline. Because the Fund investments may be concentrated in a particular geographic region or country, the Fund share value may fluctuate more than that of a less concentrated fund. Investments rated below investment grade (typically referred to as "junk") are generally subject to greater price volatility and illiquidity than higher-rated investments. No fund is a complete investment program and you may lose money investing in a fund. The Fund may engage in other investment practices that may involve additional risks and you should review the [Fund prospectus](#) for a complete description.

The Fund may engage in other investment practices that may involve additional risks and you should review the [Fund prospectus](#) for a complete description.

1. The index represents the amount generated based on the compounded daily rate of a three-month LIBOR deposit in USD. Unless otherwise stated, index returns do not reflect the effect of any applicable sales charges, commissions, expenses, taxes or leverage, as applicable. It is not possible to invest directly in an Index. Historical performance of the index illustrates market trends and does not represent the past or future performance of the fund.

2. A portion of the Fund's returns may be comprised of return of capital or short term capital gains. The Fund will determine the tax characteristics of all Fund distributions after the end of the calendar year and will provide shareholders such information at that time. Please consult your tax advisor for further information.

<b>B</b>	32.31
<b>CCC or Lower</b>	10.80
<b>Not Rated</b>	1.18
<b>Total</b>	<b>100.00</b>

Ratings are based on Moody's, S&P or Fitch, as applicable. If securities are rated differently by the ratings agencies, the highest rating is applied. Ratings, which are subject to change, apply to the creditworthiness of the issuers of the underlying securities and not to the Fund or its shares. Credit ratings measure the quality of a bond based on the issuer's creditworthiness, with ratings ranging from AAA, being the highest, to D, being the lowest based on S&P's measures. Ratings of BBB or higher by S&P or Fitch (Baa or higher by Moody's) are considered to be investment-grade quality. Credit ratings are based largely on the ratings agency's analysis at the time of rating. The rating assigned to any particular security is not necessarily a reflection of the issuer's current financial condition and does not necessarily reflect its assessment of the volatility of a security's market value or of the liquidity of an investment in the security. Holdings designated as "Not Rated" are not rated by the national ratings agencies stated above.

3. Percent of total net assets.

4. Other net assets represent other assets less liabilities and includes any investment type that represents less than 1% of net assets. Any securities sold short will be subtracted from that corresponding asset.

5. Percent of bond holdings.

6. Absolute value by percent of net assets. Currency exposures include all foreign exchange denominated assets, currency derivatives and commodities.

7. External debt exposure is defined as exposure to sovereign debt, through bond or derivative investments, issued in a currency different from the currency

that the sovereign entity can produce (print) itself. Absolute value by percent of total net assets. Includes market value of bond holdings plus credit default swaps, valued at notional plus unrealized gains/losses.

## Management

**John R. Baur**  
Managing Director, Co-Head of Emerging Markets  
Joined Eaton Vance 2005

### Biography

John is Co-Head of Emerging Markets and portfolio manager for the Emerging Markets team. He is responsible for co-leading the team with investment professionals based in Boston, Washington, D.C., London and Singapore, as well as for buy and sell decisions, portfolio construction and risk management for the team's emerging markets strategies.
