The portfolio profile is subject to change due to active management. Percentages may not total 100 % due to rounding.

The use of leverage increases risks, such that a relatively small movement in the value of an investment may result in a disproportionately large movement, unfavorable as well as favorable, in the value of that investment and, in turn, the value of the Fund.

The Fund is actively managed in reference to the BofA 3-Month Treasury Bill Index (the "Index"). The Fund does not intend to track the Index and is not constrained by it. The Index is used for performance comparison purposes only and the Fund will generally not hold any of the components of the Index.

The investment objective of the Fund is to deliver a positive absolute return in all market conditions, in the form of income plus capital appreciation over a rolling three-year period. The Fund is actively managed and seeks to achieve its objective through exposure to currencies, and U.S. and non-U.S. interest rates and issuers. Such exposure may be achieved by investing in securities and other instruments, including, debt securities (which may be fixed and/or floating rate and rated or unrated) issued by governments of both developed and emerging market countries or their sub-divisions, government agencies and government-sponsored enterprises, mortgage-backed securities and other asset-backed securities, units in open and closed-ended collective investment schemes, inflation indexed bonds issued by both governmental, quasi-governmental and/or corporate issuers, corporate debt securities (including, without limitation, convertible securities and corporate commercial paper), structured products which comply with the requirements set out in the Central Bank UCITS Regulations, deposits and participation notes.

## About Risk:

Fund share values are sensitive to stock market volatility, adverse market, economic, political, regulatory, geopolitical and other conditions. In international markets, these risks may be more significant. An imbalance in supply and demand in the income market may result in valuation uncertainties and greater volatility, less liquidity, widening credit spreads and a lack of price transparency in the market. Investments in income securities may be affected by changes in the creditworthiness of the issuer and are subject to the risk of non-payment of principal and interest. The value of income securities also may decline because of real or perceived concerns about the issuer's ability to make principal and interest payments. Derivative instruments can be used to take both long and short positions, be highly volatile, result in economic leverage (which can magnify losses) and involve risks in addition to the risks of the underlying instrument on which the derivative is based, such as counter-party, correlation and liquidity risk. If a counter-party is unable to honour its commitments, the value of Fund shares may decline and/or the Fund could experience delays in the return of collateral or other assets held by the counter-party. As interest rates rise, the value of certain income investments is likely to decline. Because the Fund investments may be concentrated in a particular geographic region or country, the Fund share value may fluctuate more than that of a less concentrated fund. Investments rated below the investment grade (typically referred to as 'junk') are generally subject to greater price volatility and illiquidity than higher-rated investments. No fund is a complete investment programme and you may lose money investing in a fund. The Fund may engage in other investment practices that may involve additional risks and you should review the [Fund prospectus](#) for a complete description.

The portfolio profile is subject to change due to active management. Percentages may not total 100 % due to rounding.

The use of leverage increases risks, such that a relatively small movement in the value of an investment may result in a disproportionately large movement, unfavorable as well as favorable, in the value of that investment and, in turn, the value of the Fund.

The Fund is actively managed in reference to the BofA 3-Month Treasury Bill Index (the "Index"). The Fund does not intend to track the Index and is not constrained by it. The Index is used for performance comparison purposes only and the Fund will generally not hold any of the components of the Index.

The investment objective of the Fund is to deliver a positive absolute return in all market conditions, in the form of income plus capital appreciation over a rolling three-year period. The Fund is actively managed and seeks to achieve its objective through exposure to currencies, and U.S. and non-U.S. interest rates and issuers. Such exposure may be achieved by investing in securities and other instruments, including, debt securities (which may be fixed and/or floating rate and rated or unrated) issued by governments of both developed and emerging market countries or their sub-divisions, government agencies and government-sponsored enterprises, mortgage-backed securities and other asset-backed securities, units in open and closed-ended collective investment schemes, inflation indexed bonds issued by both governmental, quasi-governmental and/or corporate issuers, corporate debt securities (including, without limitation, convertible securities and corporate commercial paper), structured products which comply with the requirements set out in the Central Bank UCITS Regulations, deposits and participation notes.

## About Risk:

Fund share values are sensitive to stock market volatility, adverse market, economic, political, regulatory, geopolitical and other conditions. In international markets, these risks may be more significant. An imbalance in supply and demand in the income market may result in valuation

uncertainties and greater volatility, less liquidity, widening credit spreads and a lack of price transparency in the market. Investments in income securities may be affected by changes in the creditworthiness of the issuer and are subject to the risk of non-payment of principal and interest. The value of income securities also may decline because of real or perceived concerns about the issuer's ability to make principal and interest payments. Derivative instruments can be used to take both long and short positions, be highly volatile, result in economic leverage (which can magnify losses) and involve risks in addition to the risks of the underlying instrument on which the derivative is based, such as counter-party, correlation and liquidity risk. If a counter-party is unable to honour its commitments, the value of Fund shares may decline and/or the Fund could experience delays in the return of collateral or other assets held by the counter-party. As interest rates rise, the value of certain income investments is likely to decline. Because the Fund investments may be concentrated in a particular geographic region or country, the Fund share value may fluctuate more than that of a less concentrated fund. Investments rated below the investment grade (typically referred to as 'junk') are generally subject to greater price volatility and illiquidity than higher-rated investments. No fund is a complete investment programme and you may lose money investing in a fund. The Fund may engage in other investment practices that may involve additional risks and you should review the [Fund prospectus](#) for a complete description.

1. A portion of the Fund's returns may be comprised of return of capital or short-term capital gains. The Fund will determine the tax characteristics of all Fund distributions after the end of the calendar year and will provide shareholders with such information at that time. Please consult your tax advisor for further information.

Not Rated	2.36
<b>Total</b>	<b>100.00</b>

Ratings are based on Moody's, S&P or Fitch, as applicable. If securities are rated differently by the ratings agencies, the highest rating is applied. Ratings, which are subject to change, apply to the creditworthiness of the issuers of the underlying securities and not to the Fund or its shares. Credit ratings measure the quality of a bond based on the issuer's creditworthiness, with ratings ranging from AAA, being the highest, to D, being the lowest based on S&P's measures. Ratings of BBB or higher by S&P or Fitch (Baa or higher by Moody's) are considered to be investment-grade quality. Credit ratings are based largely on the ratings agency's analysis at the time of rating. The rating assigned to any particular security is not necessarily a reflection of the issuer's current financial condition and does not necessarily reflect its assessment of the volatility of a security's market value or of the liquidity of an investment in the security. Holdings designated as "Not Rated" are not rated by the national ratings agencies stated above.

2. Per cent of total net assets.

3. Other net assets represent other assets less liabilities and include any investment type that represents less than 1% of net assets. Any securities sold short will be subtracted from that corresponding asset.

4. Per cent of bond holdings.

5. Absolute value by per cent of net assets. Currency exposures include all foreign exchange-denominated assets, currency derivatives and commodities.

6. External debt exposure is defined as exposure to sovereign debt, through bond or derivative investments, issued in a currency different from the currency that the sovereign entity can produce (print) itself. Absolute value by per cent of the total net assets. Includes the market value of bond holdings plus credit default swaps, valued at notional plus unrealised gains/losses.

## Management

**John R. Baur**

Co-Director, Emerging Markets Team  
Joined Eaton Vance in 2005

### Biography

John Baur is a vice president of Eaton Vance Management, co-director of emerging markets and portfolio manager on Eaton Vance's emerging markets team. He is responsible for co-leading the emerging markets team with investment professionals based in Boston, Washington, D.C., London and Singapore, as well as for buy and sell decisions, portfolio construction and risk management for the firm's emerging markets strategies. He joined Eaton Vance in 2005.

John began his career in the investment management industry in 2005. Before joining Eaton Vance, he was employed by Applied Materials in an engineering capacity, spending five of his seven years at the firm in Asia.

John earned a B.S. from MIT and an M.B.A. from the Johnson Graduate School of Management at Cornell University.
