## Overview

### Historical Returns (%)

as of Mar 31, 2024

**03/31/2024**

<b>Fund at NAV</b>	2.78	6.85	6.85	24.93	7.27	12.55	9.83
<b>Market Price</b>	2.65	7.45	7.45	20.74	5.91	9.02	9.65

Past performance is no guarantee of future results. Investment return and principal value will fluctuate so that shares, when sold, may be worth more or less than their original cost. Performance is for the stated time period only; due to market volatility, the Fund's current performance may be lower or higher than quoted. The Fund's performance at market price will differ from its results at NAV. Returns are historical and are calculated by determining the percentage change in net asset value or market price (as applicable) with all distributions reinvested and includes management fees and other expenses. Until the reinvestment of Fund distributions is completed, returns are calculated using the lower of the net asset value or market price of the shares on the distribution ex date. Once the reinvestment is complete, returns are calculated using the average reinvestment price. Performance less than or equal to one year is cumulative.

The Fund has adopted a policy to pay common shareholders a stable monthly distribution, and may pay distributions consisting of amounts characterized for federal income tax purposes as qualified and non-qualified ordinary dividends, capital gains distributions and nondividend distributions, also known as return of capital. There is no assurance that the Fund will always be able to pay distributions of a particular size. [Click here for more information.](#)

The information contained herein is provided for informational purposes only and does not constitute a solicitation of an offer to buy or sell Fund shares. Common shares of the Fund are only available for purchase and sale at current market price on a stock exchange. There is no assurance that the Fund will achieve its investment objective. The Fund is subject to numerous risks, including investment risks. Shares of closed-end funds often trade at a discount from their net asset value. The Fund is not a complete investment program and you may lose money investing in the Fund. An investment in the Fund may not be appropriate for all investors. Investors should review and consider carefully the Fund's investment objective, risks, charges and expenses.

The premium/discount is calculated as [(market price/NAV)-1].

## RISK CONSIDERATIONS

The value of investments held by the Fund may increase or decrease in response to economic, and financial events (whether real, expected or perceived) in the U.S. and global markets. The value of equity securities is sensitive to stock market volatility. Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical, currency exchange rates or other conditions. Changes in the dividend policies of companies could make it difficult to provide a predictable level of income. Dividend capture strategies may result in higher portfolio turnover, increased trading costs and potential for capital loss or gains. When interest rates rise, the value of preferred stocks will generally decline. Investments rated below investment grade (sometimes referred to as "junk") are typically subject to greater price volatility and illiquidity than higher rated investments. Borrowing to increase investments ("leverage") may exaggerate the effect of any increase or decrease in the value of Fund investments. Market conditions may limit the ability to generate tax losses or to generate dividend income taxed at favorable tax rates. The Fund's ability to utilize various tax-managed techniques may be curtailed or eliminated in the future by tax legislation or regulation. The impact of the coronavirus on global markets could last for an extended period and could adversely affect the Fund's performance. The Fund may engage in other investment practices that may involve additional risks.

1. Distribution Rate at NAV and Market Price is calculated by dividing the last distribution paid per share (annualized) by NAV or market price, respectively. A Fund's distributions in any period may be more or less than the net return earned by the Fund on its investments, and therefore should not be used as a measure of performance or confused with "yield" or "income."

2. The Fund has adopted a policy to pay common shareholders a stable monthly distribution, and may pay distributions consisting of amounts characterized for federal income tax purposes as qualified and non-qualified ordinary dividends, capital gains distributions and non-dividend distributions, also known as return of capital.

3. Interest and fee expense relates to borrowings for the purpose of financial leverage.

1. Distribution Rate at NAV and Market Price is calculated by dividing the last distribution paid per share (annualized) by NAV or market price, respectively. A Fund's distributions in any period may be more or less than the net return earned by the Fund on its investments, and therefore should not be used as a measure of performance or confused with "yield" or "income."
2. The Fund has adopted a policy to pay common shareholders a stable monthly distribution, and may pay distributions consisting of amounts characterized for federal income tax purposes as qualified and non-qualified ordinary dividends, capital gains distributions and non-dividend distributions, also known as return of capital.
4. See "Tax Character of Distributions". For information about any distributions in the current year estimated to include non-dividend distributions or capital gains, please refer to [Eaton Vance Closed-End Fund Distribution Notices \(19a\)](#).
5. The Fund has adopted a policy to pay common shareholders a stable monthly distribution. In an effort to maintain a stable distribution amount, the Fund may pay distributions consisting of amounts characterized for federal income tax purposes as qualified and non-qualified ordinary dividends, capital gains distributions and nondividend distributions, also known as return of capital. A nondividend or return of capital distribution may include, for example, a return of some or all of the money that an investor invested in Fund shares, which can cause the Fund's NAV to erode. There is no assurance that the Fund will always be able to pay distributions of a particular size.
