Distribution Rates as of May 2, 2024, unless otherwise indicated.

Distribution Rates

Returns are historical and are calculated by determining the percentage change in net asset value (NAV) with all distributions reinvested. The Fund's past performance is no guarantee of future results. Investment return and principal value of Fund shares will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Performance is for the stated time period only; due to market volatility, the Fund's current performance may be lower or higher than the quoted return. Performance less than one year is cumulative.

¹ The Distribution Rate is based on the Fund's most recent regular distribution per share (annualized) divided by the Fund's NAV or market price at the end of the period. The Fund's distribution may be comprised of ordinary income, net realized capital gains and returns of capital. Certain Funds have adopted a managed distribution plan. Regular distributions throughout the year may include net realized capital gains, net investment income and a return of capital. A return of capital distribution does not necessarily reflect the Fund's investment performance and should not be confused with "yield" or "income." <u>Click here for more information.</u>
