[Calvert's Approach to Investing in the Energy Transition](#)

By: [Tarek Soliman](#), [Anuj Goyal](#) |

November 8, 2023

The energy system powers every corner of the modern economy from oil for transport and chemicals, to natural gas for heating and industry, to coal for electricity generation and steel production. Oil and gas provide over 50% of world primary energy which rises to over 80% when including coal, forming the backbone of global supply today and highlighting the magnitude of the task of an energy system transformation. This system keeps the world moving and powers economic activity, but it is prone to geopolitical disruption and price volatility. This volatility has highlighted long-term concerns that Calvert has long held about the extent to which the current global energy system relies on fossil fuels.

[Financial Materiality of PFAS Is Rising](#)

By: *Emily Wagner* | & *Kara Huang* | *September 7, 2023*

New York - At Calvert, one ESG issue we examine that is material to a wide range of companies is the use of per and polyfluoroalkyl substances (PFAS). These are a group of widely used chemicals valued for their versatility in repelling or resisting grease, oil, water and heat. Because they do not break down over time, they are commonly referred to as "Forever Chemicals" and are now widely used in applications like firefighting foams, water-resistant fabric and textiles, non-stick cookware and personal care products. Due to this ubiquitous use, PFAS chemicals can be found in water, air, fish and soil across the globe and have been found in blood levels of people and animals.
