## Calvert's Approach to Investing in the Energy Transition

November 8, 2023

The energy system powers every corner of the modern economy from oil for transport and chemicals, to natural gas for heating and industry, to coal for electricity generation and steel production. Oil and gas provide over 50% of world primary energy which rises to over 80% when including coal, forming the backbone of global supply today and highlighting the magnitude of the task of an energy system transformation. This system keeps the world moving and powers economic activity, but it is prone to geopolitical disruption and price volatility. This volatility has highlighted long-term concerns that Calvert has long held about the extent to which the current global energy system relies on fossil fuels.
