[Managed Fund since 2021](#)

The portfolio profile is subject to change due to active management. Percentages may not total 100 % due to rounding.

The use of leverage increases risks, such that a relatively small movement in the value of an investment may result in a disproportionately large movement, unfavorable as well as favorable, in the value of that investment and, in turn, the value of the Fund.

The Fund is actively managed in reference to J.P. Morgan EMB (JEMB) Hard Currency/Local currency 50-50 (the "Index"). The Fund does not intend to track the Index. The Investment Adviser has discretion in its choices of investments and may invest in instruments which are not included in the Index, and it is generally expected that a significant portion of its investments will be non-Index constituents at any given time. The Fund targets a tracking error relative to the Index of between 300 and 600 basis points and a 200 to 300 basis point return above the Index and the Investment Adviser has also set guidelines in respect of volatility, correlation and beta relative to the Index.

The investment objective of the Fund is to generate total return. Total return is defined as income plus capital appreciation. The Fund will be actively managed and seeks its investment objective by investing in instruments to establish long and short investment exposures to emerging markets. The Fund will invest at least 80% of its Net Asset Value in: (i) fixed income securities issued by emerging market entities or emerging market sovereign nations; and/or (ii) derivative instruments denominated in or based on the currencies, interest rates, or issues of emerging

market countries. The Fund will invest in fixed income securities listed, traded or dealt on Recognised Markets (such as sovereign bonds and debentures, mortgage-backed securities ("MBS") and asset-backed securities, convertible debt securities (which may embed derivatives), contingent convertible bonds ("CoCos"), municipal obligations, corporate bonds and debentures, fixed-income and floating rate debt securities and participation notes (such participation notes may be listed or unlisted and the Fund will invest no more than 10% of its Net Asset Value in participation notes.

This Fund is classified as an Article 8 product under the Sustainable Finance Disclosure Regulation. Article 8 products are those which promote environmental or social characteristics and which integrate sustainability into the investment process in a binding manner.

RISK CONSIDERATIONS

The value of investments held by the Fund may increase or decrease in response to economic, and financial events (whether real, expected or perceived) in the U.S. and global markets. Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical, currency exchange rates or other conditions. In emerging countries, these risks may be more significant. Investments in debt instruments may be affected by changes in the creditworthiness of the issuer and are subject to the risk of non-payment of principal and interest. The value of income securities also may decline because of real or perceived concerns about the issuer's ability to make principal and interest payments. The Fund's exposure to derivatives involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other investments. Derivatives instruments can be highly volatile, result in leverage (which can increase both the risk and return potential of the Fund), and involve risks in addition to the risks of the underlying instrument on which the derivative is based, such as counterparty, correlation and liquidity risk. If a counterparty is unable to honor its commitments, the value of Fund shares may decline and/or the Fund could experience delays in the return of collateral or other assets held by the counterparty. As interest rates rise, the value of certain income investments is likely to decline. Because the Fund may invest significantly in a particular geographic region or country, value of Fund shares may fluctuate more than a fund with less exposure to such areas. A non-diversified fund may be subject to greater risk by investing in a smaller number of investments than a diversified fund. Investments rated below investment grade (sometimes referred to as "junk") are typically subject to greater price volatility and illiquidity than higher rated investments. The Fund is exposed to liquidity risk when trading volume, lack of a market maker or trading partner, large position size, market conditions, or legal restrictions impair its ability to sell particular investments or to sell them at advantageous market prices. No fund is a complete investment program and you may lose money investing in a fund. The Fund may engage in other investment practices that may involve additional risks and you should review the [Fund prospectus](#) for a complete description.
