EXPERT INSIGHTS

[Calvert Launches 'Stop the Leaks' to Combat Climate Change Impacts](#)

March 16, 2023

Washington - Methane is a significant cause of climate change. Molecule for molecule, it is 80 times worse than carbon dioxide emissions over a 20-year period.¹ It leaks into the atmosphere from oil and gas production and transport equipment as well as from other sources like coal mines. The infrastructure is literally leaky. As this causes our global economy to continue to increase the total amount of greenhouse gas emissions, we feel this is a financially material ESG issue for many companies, for investors in the energy sector and for industries across the energy value chain.

International Equities Offer Potential Opportunities over U.S. Equities in 2023

February 17, 2023

London - The strong outperformance of European equity markets from mid-October last year continued into January, as fears of an energy crisis in Europe have abated. The surprisingly quick re-opening of China from zero-COVID measures, along with a more pro-growth policy shift, will combine with lower energy prices to deliver much-needed growth stimulation for Asia-Pacific.

January Leadership Won't Last

February 13, 2023

Boston - The old Wall Street adage, "As goes January, so goes the year," gives us pause as we ponder that broad equity indexes like the Russell 1000 (6.7% total return) posted strong positive returns last month.
