Fact Sheet

Mar 31, 2024

The Fund

The Fund invests in common stocks, income instruments, preferred stocks and hybrid securities around the globe that the portfolio managers believe may provide attractive levels of income. For its investments in common stocks, the managers may also seek to invest in securities they believe have the potential to grow income and/or provide capital appreciation over time.

The Approach

Fund managers employ a bottom-up, research driven process to identify what they believe are attractive global securities up and down the capital structure. Management endeavors to invest in income producing instruments, coupled with investments in common stocks that may have the potential for growth of income and capital appreciation over time. Overall asset allocation decisions are made collectively by the portfolio management team.

The Features

The global, multi-asset class approach may provide diversification benefits as management seeks to uncover opportunities across an array of income producing securities and common stock. The Fund expects to invest 50-80% of its net assets in common stocks, 0-30% in preferred stocks and other hybrid securities (which generally possess characteristics common to both equity and debt securities), and 10-40% in income instruments including cash or money market instruments.¹

Morningstar Rating™

as of Mar 31, 2024

Time Period	Rating	Funds in Global Allocation Category
Overall	★★★★	356

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds and exchange-traded funds) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star.

The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Star ratings do not reflect the effect of any applicable sales load. Hollow stars denote Morningstar Extended Performance Ratings and are considered estimates based on the performance of the fund's oldest share class, adjusted for fees and expenses.

Portfolio profile subject to change due to active management. Percentages may not total 100% due to rounding. Fund primarily invests in an affiliated investment company (Portfolio) with the same objective(s) and policies as the Fund and may also invest directly. References to investments are to the aggregate holdings of the Fund and the Portfolio.

RISK CONSIDERATIONS

The value of investments held by the Fund may increase or decrease in response to economic, and financial events (whether real, expected or perceived) in the U.S. and global markets. The value of equity securities is sensitive to stock market volatility. Changes in the dividend policies of companies could make it difficult to provide a predictable level of income. Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical, currency exchange rates or other conditions. Dividend capture strategies may result in higher portfolio turnover, increased trading costs and potential for capital loss or gains. When interest rates rise, the value of preferred stocks will generally decline. Investments rated below investment grade (sometimes referred to as "junk") are typically subject to greater price volatility and illiquidity than higher rated investments. As interest rates rise, the value of certain income investments is likely to decline. The Fund is exposed to liquidity risk when trading volume, lack of a market maker or trading partner, large position size, market conditions, or legal restrictions impair its ability to sell particular investments or to sell them at advantageous market prices. The impact of the coronavirus on global markets could last for an extended period and could adversely affect the Fund's performance. No fund is a complete investment program and you may lose money investing in a fund. The Fund may engage in other investment practices that may involve additional risks and you should review the [Fund prospectus](#) for a complete description.

1. The Fund's investments in income instruments and preferred stocks and other hybrid securities are expected to be primarily rated below investment grade (i.e., rated below BBB-by Standard & Poor's Ratings Services or Fitch Ratings, or below Baa- by Moody's Investors Service, Inc. or, if unrated, determined to be of comparable quality by the investment adviser or sub-adviser).

2. MSCI World Index is an unmanaged index of equity securities in the developed markets. Unless otherwise stated, index returns do not reflect the effect of any applicable sales charges, commissions, expenses, taxes or leverage, as applicable. It is not possible to invest directly in an index. Historical performance of the index illustrates market trends and does not represent the past or future performance of the fund. MSCI indexes are net of foreign withholding taxes. Source: MSCI. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or

approved this report, and has no liability hereunder.

3. ICE BofA Developed Markets High Yield Ex-Subordinated Financial Index is an unmanaged index of global developed market below investment grade corporate bonds. Unless otherwise stated, index returns do not reflect the effect of any applicable sales charges, commissions, expenses, taxes or leverage, as applicable. It is not possible to invest directly in an index. Historical performance of the index illustrates market trends and does not represent the past or future performance of the fund. ICE® BofA® indices are not for redistribution or other uses; provided "as is", without warranties, and with no liability. Eaton Vance has prepared this report and ICE Data Indices, LLC does not endorse it, or guarantee, review, or endorse Eaton Vance's products. BofA® is a licensed registered trademark of Bank of America Corporation in the United States and other countries.

4. Source: Fund prospectus.

5. Net Expense Ratio reflects a contractual expense reimbursement that continues through 3/1/25. Without the reimbursement, if applicable, performance would have been lower.

6. Top 10 Holdings excludes cash and equivalents.

7. Percent of total net assets.

4. Source: Fund prospectus.
5. Net Expense Ratio reflects a contractual expense reimbursement that continues through 3/1/25. Without the reimbursement, if applicable, performance would have been lower.
8. SEC 30-day yield is a standardized measure based on the estimated yield to maturity of a fund's investments over a 30-day period and is based on the maximum offer price at the date specified. The SEC 30-day yield is not based on the distributions made by the fund, which may differ. Subsidized yield reflects the effect of fee waivers and expense reimbursements. Distribution Rate at NAV is calculated by dividing the last distribution paid per share (annualized) by NAV. The Fund's monthly distribution may be comprised of ordinary income, net realized capital gains and returns of capital.
9. Alpha measures risk-adjusted performance, showing excess return delivered at the same risk level as the benchmark. Beta measures the volatility of a fund relative to the overall market. R-Squared represents the percentage of the portfolio's movement that can be explained by the general movement of the market. Standard deviation measures the historic volatility of a fund. Sharpe Ratio uses standard deviation and excess return to determine reward per unit of risk.
10. A portion of the Fund's returns may be comprised of return of capital or short term capital gains. The Fund will determine the tax characteristics of all Fund distributions after the end of the calendar year and will provide shareholders such information at that time. Please consult your tax advisor for further information.

Ratings are based on Moody's, S&P or Fitch, as applicable. If securities are rated differently by the ratings agencies, the highest rating is applied. Ratings, which are subject to change, apply to the creditworthiness of the issuers of the underlying securities and not to the Fund or its shares. Credit ratings measure the quality of a bond based on the issuer's creditworthiness, with ratings ranging from AAA, being the highest, to D, being the lowest based on S&P's measures. Ratings of BBB or higher by S&P or Fitch (Baa or higher by Moody's) are considered to be investment-grade quality. Credit ratings are based largely on the ratings agency's analysis at the time of rating. The rating assigned to any particular security is not necessarily a reflection of the issuer's current financial condition and does not necessarily reflect its assessment of the volatility of a security's market value or of the liquidity of an investment in the security. Holdings designated as "Not Rated" are not rated by the national ratings agencies stated above.

The value of equity securities is sensitive to stock market volatility. Changes in the dividend policies of companies could make it difficult to provide a predictable level of income. Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical, currency exchange rates or other conditions. Dividend capture strategies may result in higher portfolio turnover, increased trading costs and potential for capital loss or gains. When interest rates rise, the value of preferred stocks will generally decline. Investments rated below investment grade (sometimes referred to as "junk") are typically subject to greater price volatility and illiquidity than higher rated investments. As interest rates rise, the value of certain income investments is likely to decline. The Fund is exposed to liquidity risk when trading volume, lack of a market maker or trading partner, large position size, market conditions, or legal restrictions impair its ability to sell particular investments or to sell them at advantageous market prices. The impact of the coronavirus on global markets could last for an extended period and could adversely affect the Fund's performance. No fund is a complete investment program and you may lose money investing in a fund. The Fund may engage in other investment practices that may involve additional risks and you should review the [Fund prospectus](#) for a complete description.

2. MSCI World Index is an unmanaged index of equity securities in the developed markets. Unless otherwise stated, index returns do not reflect the effect of any applicable sales charges, commissions, expenses, taxes or leverage, as applicable. It is not possible to invest directly in an index. Historical performance of the index illustrates market trends and does not represent the past or future performance of the fund. MSCI indexes are net of foreign withholding taxes. Source: MSCI. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder.

7. Percent of total net assets.

11. A delay in transaction settlement may result in a negative cash position.

12. Preferred stocks include both U.S. and foreign securities.

13. The Fund may obtain exposure to certain market segments through investments in Exchange-Traded Funds (ETFs) and futures. For purposes of the asset breakdowns, allocations with respect to the Fund's investments in ETFs and futures are based on the underlying portfolio composition of each ETF

and future as of the calendar quarter end.

14. Active Share is a measure of the differentiation of the holdings of a portfolio from the holdings of its appropriate benchmark index. It is calculated as one half of the sum of the absolute value of the differences found between the portfolio weights and the benchmark weights.

15. Percent of equity holdings, ex cash.

16. Percent of bond holdings.

Management

Christopher M. Dyer, CFA

Managing Director, Co-Head of Eaton
Vance Equity
