Commentary

Mar 31, 2021

The Fund

The Fund's rules-based, top-down process seeks to take advantage of certain quantitative and behavioral characteristics of the commodity markets.

The Approach

The Fund offers a broad-based commodity exposure across 32 commodities that make up the index. This is delivered through a system of target weights and rebalancing bands, which systematically rebalance the portfolio back to these target weights. This disciplined process captures a "rebalancing alpha" ¹ independent of any forward looking views.

The Features

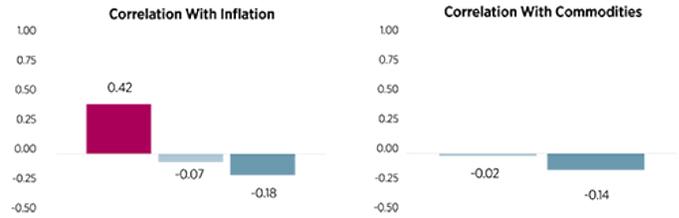

Commodities have historically provided investors with a hedge against inflation, as well as returns that are uncorrelated to more traditional asset classes, such as stocks and bonds.

A hedge against inflation, and diversification for a portfolio.²

Commodities have shown a high correlation to inflation, but negative correlation to stocks and bonds. (January 1973-December 2018)

- Commodities
- Stocks
- Bonds

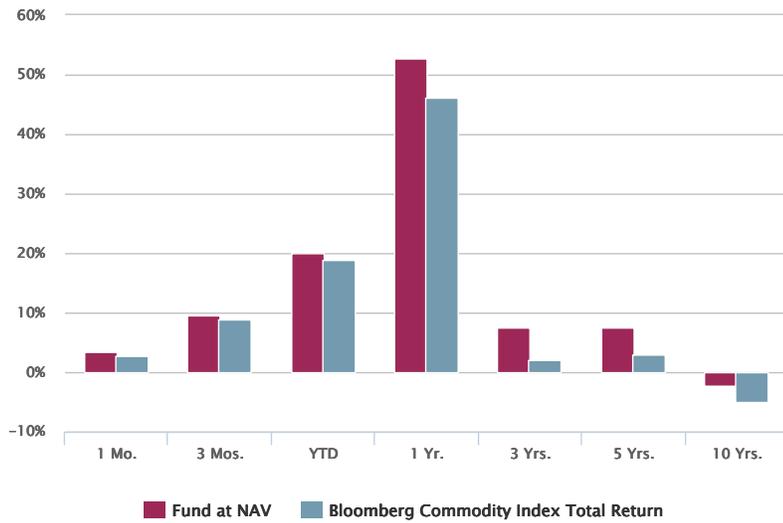

Not based on the return of any specific fund.

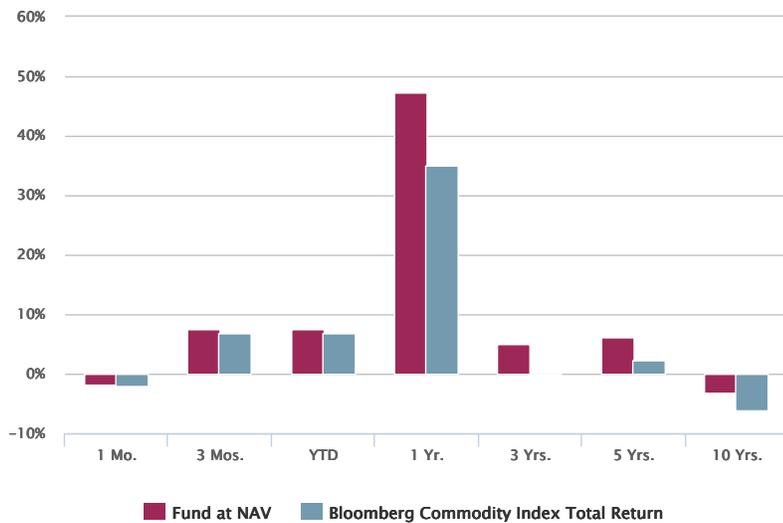

Historical Returns (%)

as of Mar 31, 2021

05/31/2021

03/31/2021

Past performance is no guarantee of future results. Investment return and principal value will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Performance is for the stated time period only; due to market volatility, the Fund's current performance may be lower or higher than quoted. Returns are historical and are calculated by determining the percentage change in net asset value (NAV) with all distributions reinvested. Returns for other classes of shares offered by the Fund are different. Performance less than or equal to one year is cumulative. Total return prior to the commencement of the class reflects returns of another Fund class. Prior returns are adjusted to reflect applicable sales charge (but were not adjusted for other expenses). If adjusted for other expenses, returns would be lower. The share class has no sales charge.

05/31/2021

Morningstar Rating™

as of May 31, 2021

Time Period	Rating	Funds in Commodities Broad Basket Category
Overall	★★★★★	96
3 Years	★★★★★	96
5 Years	★★★★★	81
10 Years	☆☆☆☆☆	47

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds and exchange-traded funds) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star.

The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Star ratings do not reflect the effect of any applicable sales load. Hollow stars denote Morningstar Extended Performance Ratings and are considered estimates based on the performance of the fund's oldest share class, adjusted for fees and expenses.

About Risk:

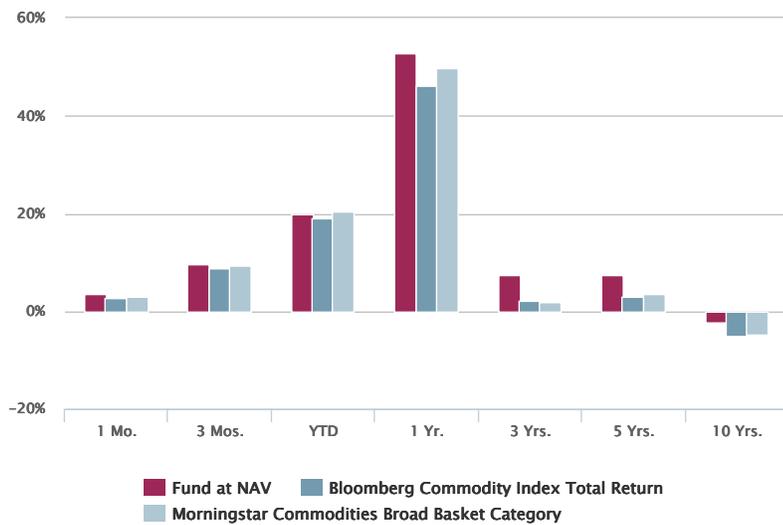

The value of investments held by the Fund may increase or decrease in response to economic, and financial events (whether real, expected or perceived) in the U.S. and global markets. The value of commodities investments will generally be affected by overall market movements and factors specific to a particular industry or commodity, including weather, embargoes, tariffs, or health, political, international and regulatory developments. The Fund's exposure to derivatives involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other investments. Derivatives instruments can be highly volatile, result in leverage (which can increase both the risk and return potential of the Fund), and involve risks in addition to the risks of the underlying instrument on which the derivative is based, such as counterparty, correlation and liquidity risk. If a counterparty is unable to honor its commitments, the value of Fund shares may decline and/or the Fund could experience delays in the return of collateral or other assets held by the counterparty. As interest rates rise, the value of certain income investments is likely to decline. Because the Fund may invest significantly in a particular sector, the Fund share value may fluctuate more than a fund with less exposure to such sector. The Fund is exposed to liquidity risk when trading volume, lack of a market maker or trading partner, large position size, market conditions, or legal restrictions impair its ability to sell particular investments or to sell them at advantageous market prices. The sub-adviser uses proprietary investment techniques and analyses in making investment decisions for the Fund. A systematic investment process is dependent on the sub-adviser's skill in developing and maintaining that process. The impact of the coronavirus on global markets could last for an extended period and could adversely affect the Fund's performance. No fund is a complete investment program and you may lose money investing in a fund. The Fund may engage in other investment practices that may involve additional risks and you should review the [Fund prospectus](#) for a complete description.

1. Rebalancing alpha is the excess return generated by systematically selling outperforming assets and buying underperforming assets over multiple time periods.
 2. Source: Zephyr. Inflation is represented by the Consumer Price Index. Stocks are represented by the S&P 500 Index, an unmanaged index of large-cap stocks commonly used as a measure of U.S. stock market performance. Bonds are represented by Barclays U.S. Government/Credit Bond Index, which measures performance of U.S. Treasuries, government-related issues and investment-grade U.S. corporate securities with a maturity greater than one year. Commodities are represented by S&P Goldman Sachs Commodity Index, a benchmark for performance of commodity markets. To review the most recent period of rising inflation, S&P Goldman Sachs Commodity Index (inception Jan. 1970) was used instead of Bloomberg Commodity Index Total Return (inception Feb. 1991) based on the longer historical record. Correlation is a measure of an investment's movement in relation to another. Correlation of 1 means investments move together in perfect lockstep.
 3. Bloomberg Commodity Index Total Return is designed to provide diversified commodity exposure, with weightings based on each underlying commodity's liquidity and economic significance. Unless otherwise stated, index returns do not reflect the effect of any applicable sales charges, commissions, expenses, taxes or leverage, as applicable. It is not possible to invest directly in an index. Historical performance of the index illustrates market trends and does not represent the past or future performance of the fund.
