

Distribution Rates

Returns are historical and are calculated by determining the percentage change in net asset value (NAV) with all distributions reinvested. The Fund's past performance is no guarantee of future results. Investment return and principal value of Fund shares will fluctuate so that shares, when redeemed, may be worth more or less than their original cost. Performance is for the stated time period only; due to market volatility, the Fund's current performance may be lower or higher than the quoted return. Performance less than one year is cumulative.

FILTER FUNDS BY:

Distribution Rates as of Jun 11, 2021, unless otherwise indicated.

Fund Name	Symbol	Distribution Rate at NAV ¹	Distribution Rate at MKT ¹	Standardized Performance

Tax-Managed Global Diversified Equity Income Fund	EXG	7.14	7.18	more info

¹ The Distribution Rate is based on the Fund's most recent regular distribution per share (annualized) divided by the Fund's NAV or market price at the end of the period. The Fund's distribution may be comprised of ordinary income, net realized capital gains and returns of capital. Certain Funds have adopted a managed distribution plan. Regular distributions throughout the year may include net realized capital gains, net investment income and a return of capital. A return of capital distribution does not necessarily reflect the Fund's investment performance and should not be confused with "yield" or "income." [Click here for more information.](#)
