The following is a brief summary of some of the risks associated with asset classes that may be mentioned on the Eaton Vance Twitter, LinkedIn, or Facebook pages. It is not an all-encompassing list of the risks that may apply to all asset classes that may be mentioned.

- **Equities:** Investments are sensitive to stock market volatility.
- **International Investing:** Investments in foreign instruments or currencies can involve greater risk and volatility than U.S. investments because of adverse market, economic, political, regulatory, geopolitical or other conditions. In emerging or frontier countries, these risks may be more significant.
- **Fixed Income:** An imbalance in supply and demand in the income market may result in valuation uncertainties and greater volatility, less liquidity, widening credit spreads and a lack of price transparency in the market. As interest rates rise, the value of certain income investments is likely to decline.
- **Alternatives:** May be subject to liquidity risk, economic leverage (which can magnify losses) and can be highly volatile.
